When it comes to the statistics you need most for your digital publications, views are probably the first thing that springs to mind. You want to know how often your publications are being read online in order to measure their success with your audience. Views are undeniably a key metric for anyone publishing digitally. It makes sense to check in on your publications and see how many times they have been displayed. The more context you have for this information, however, the more valuable it will be to you. A longer data history means that you can distinguish a short-term decline in readership for one of your publications from its overall long-term growth, or even model month-to-month views. In the case of data for your digital publications, more is definitely more. Looking at data that you may not be taking into account yet can refresh your approach to analytics and reveal fresh insights into your readership. A relatively even average reading time from page to page could indicate that readers tend to browse your publication. A clear spike in reading time on a particular page, however, suggests that readers are looking for specific information. Similarly, a noticeable peak in views at a certain time of day might correlate to an event mentioned in your publication as readers seek out the details. Add in the quantity, date and time of reader downloads and you begin to have a clearer picture of how your audience makes use of your digital publications. To take full advantage of your readership data, you can use it to try out changes in your own publications. Knowing what works will let you build on successful features and experiment with areas that you wish to improve. This applies not only to your content but also to an element of your publication such links. You can view clicks on external links, audio and video elements in your documents, as well as the CTR Click-Through Rate automatically calculated for each.
