Gravity swift 7

Rating: 3. Play Fullscreen. G-Switch is an addictive multiplayer parkour game for up to 6 players. G-Switch is short for gravity switch. A free one-button jump'n'run game with a twist. Because you're not really running in this online game, the character with the big shoes does it for you. You're switching the center of gravity to be above or below your screen. That's why you only need to hit one button to let your character make it past obstacles and chasms on your dangerous track. G-Switch is a multiplayer running game for 1 to 6 players in which you need to make sure your character neither falls or flies off your screen. Your reflexes need to be on point to make it to the end of the level. Do you have what it takes? Enjoy this free running game on Silvergames. G-Switch Rating: 3. Snakes and Ladders. Tank Trouble 2. Gun Mayhem 2. Tube Jumpers. Getaway Shootout. Platform Racing 2. Moto Trial Racing. Portal 2 Coop. Soccer Physics 2. Color Tunnel. Temple Run 2. Parkour Simulator 3D. Fireboy and Watergirl 5. Virtual Families: Cook Off. Dance Simulator. Raft Survival Simulator. Paper Flight 2. Instagirls Valentines Dress Up. Fight Arena Online. Exit Game. Acer recaptures the throne for the world's thinnest laptop while offering a vibrant display, comfortable keyboard and 4G LTE capability. All hail the king! Somehow, Acer managed to fit a gorgeous, inch display; a comfortable, full-size keyboard; and 4G LTE connectivity into that tiny frame. And despite having a thinner battery, the notebook squeezed out over 9 hours of battery life in our testing. But a few sacrifices had to be made at the altar of svelteness. For the Swift 7, it's a pair of weak speakers and a 7th Generation Intel Core processor that trails the fastest ultraportables. Call it a weapon of slim destruction. Acer is clearly winning the fight for the thinnest notebook. Weighing 2. However, when it comes to weight, the Swift 7 is a middleweight compared to its competitors. The Swift 7's design is a marvel. Made of black CNC aluminum , the laptop is not only sleek but also surprisingly substantial. Instead, I spent a significant amount of time admiring the exterior, with its nearly seamless construction. Thanks to its fanless design, the notebook looks like a single piece of metal, with the exception of the rear hinges and the glittering chrome Acer logo on the lid. Speaking of those hinges, they enable the display to lie flat at a degree angle. I particularly liked the Swift logo embossed at the back of the device and the way the bottom edges of the system thicken via an oh-so-delicate curve. Best of all, thanks to a special nano coating, the Swift 7 withstood the assault of my typically oily fingers, keeping a relatively pristine finish. The laptop's interior is just as captivating. The deck is also made of cool-to-the-touch black aluminum. The island-style keyboard is enclosed in a modest recess toward the top of the deck and is flanked by a fingerprint scanner with a diamond-cut border. It's a small, elegant touch that Acer employed on the touchpad and the display. My only gripe with the Swift's design is that the webcam is mounted in the bottom display bezel more on that later. When you're working with a laptop as thin as the Swift 7, you're going to take a hit in the ports department. On the right, there's a power button and the nano SIM slot. So what does that mean for folks looking to connect a mouse or an external hard drive? Dongles, dongles and more dongles. In addition to its power cord, the Swift 7 ships with a multiuse dongle that has a USB 3. The Swift 7's svelteness doesn't stop at the chassis. The inch IPS panel is only 0. Acer has reduced the size of the top 0. Still, I'm a fan of the vanishing-bezel trend. Bezels aside, the Swift 7's x screen is bright and bursting with color. When I watched the Support the Girls trailer, Regina Hall's honey-brown skin glowed against her magenta top, while the sun played up the golden highlights in her hair. Details were crisp enough that I could make out individual strands of hair cascading in the sunlight. The Swift 7's display can reproduce a whopping percent of the sRGB color gamut. That's more vivid than the percent produced by the HP Spectre 13, the percent from the LG Gram and the percent from the Huawei MateBook X Pro , and also better than the premium-laptop average. When we measured the Swift 7's brightness , it averaged nits, which was just enough to top the nit average and the Spectre 13's nits. The Gram was a little brighter, at nits, but the MateBook was the brightest of all, at nits. When used as a touch screen, the Swift 7's finger capacitive panel is quick and responsive, keeping pace with my scribbles and doodles. A thin chassis doesn't typically make for big sound, and the Swift is no exception. Once I made the required adjustments, the keyboard and synths were pretty clear, with punchy percussion. Sullivan's luscious alto poured out from the speakers, and yet I still felt like I had to get closer to really hear anything. In short, make sure you have a pair of headphones or a Bluetooth speaker handy when you're listening to music or watching movies on the Swift 7. Considering that the Swift 7 is so thin, I was expecting a rather uncomfortable typing experience, but I was pleasantly surprised. Despite the keys' 1 millimeter of key travel 1, I hit my usual 70 words per minute on the 10fastfingers. The white backlighting made typing in the dark pretty easy, since it sufficiently illuminated the text on the keys. The most polarizing aspect of the Swift 7 is its Precision Touchpad. The 4. My fingers had plenty of space to perform Windows

multitouch gestures such as pinch to zoom and three- and four-finger swipe, and presses on the superwide space delivered a speedy, accurate response. But outside of the touchpad's silky-smooth feel and size, I believe many people are going to take issue with the lack of a click. That's right; attempts to click on the bottom corners of the touchpad won't deliver the expected right or left mouse button functionality. Instead, I had to adjust to double-tapping to get the desired effect, and I still haven't figured out how to drag and drop. Positioned along the left side of the keyboard, the fingerprint scanner lets you unlock your laptop using Windows Hello. Setup takes about a minute after you create a traditional password, and consists of repeatedly placing and lifting your finger on the scanner for approximately a minute. As modern as the Swift 7's design is, its 7th Gen 1. Intel's Y-series chips are specifically built to accommodate fanless designs, but they tend to lack the power of regular U-series chips. It's a decision that puts this ultraportable at a disadvantage compared to its peers. Still, I had no issues when streaming an episode from the second season of Luke Cage with a Twitch stream playing in one of the 17 other Google Chrome tabs I had open while running Windows Defender. The performance deficiency showed as soon as we began running synthetic benchmark tests. On Geekbench 4, which measures overall CPU performance , the Swift 7 scored 6,, which is far below the 10, premium-laptop average. Armed with their 8th Gen 1. On our productivity test, the Swift 7 took 3 minutes and 1 second to pair 65, names and addresses -- far longer than the average. That's somewhat short of the The XPS 13 hit You can even play some Overwatch , but more graphically demanding titles , like The Witcher 3, are out of the system's reach. The svelte device delivered 31 frames per second on the Dirt 3 test, which is slightly above our fps playability average but a long way from the fps average as well as the frame rates from the Gram, the Spectre 13 Intel HD Graphics and the MateBook Nvidia GeForce GTX MX , which hit 50, 57 and fps, respectively. That's not enough to match the Spectre 13 75, , the Gram 67, , the category average 84, or the MateBook , The XPS 13 also scored higher than the Swift 7, at 77, Ever been on a business trip when you needed to shoot off an important email, and the internet connection was incredibly spotty or nonexistent? And if you don't have a nano SIM card handy, you can use the laptop's embedded eSIM technology to get service via software. Because of the Swift 7's tiny dimensions, I wasn't expecting it to have good battery life , especially once I learned that the two-cell lithium-ion battery is percent slimmer than standard laptop batteries. But the system lasted 9 hours and 4 minutes on the Laptop Mag Battery Test, which consists of continuous web surfing over Wi-Fi at nits of brightness. No fan, no problem. Thanks to Intel's ultra-low-power processor, the Swift 7 doesn't get particularly hot. In fact, after 15 minutes of streaming a full-screen HD video, the laptop was well within our degree-Fahrenheit comfort threshold. The touchpad measured 79 degrees, while the middle of the keyboard and bottom registered 80 and 84 degrees, respectively. I can't even call the Swift 7's p integrated webcam a "nose cam," since it lacks the strategic angling of webcams on similarly skinny systems like the Dell XPS Rather, the Swift has a torso cam, which cut my face out of the picture when I was sitting down but was positioned perfectly when I was lying down and typing in bed. As for the actual photos, the color accuracy was on point, capturing the exact shade of blue of my bedroom walls and the varied gradients of wood in my headboard. The pictures were full of visual noise, which obscured fine details like the white flowers on my dress. Acer preinstalled its usual suite of branded software, including Care Center, which lets you check system diagnostics and create and manage backups. You also get Quick Access, where you can enable or disable Bluelight Shield, which reduces blue light to protect your eyes, and Color Intelligence, which automatically optimizes the image quality based on what's displayed. In the battle for slim laptop supremacy, Acer has the industry's number. The Swift 7 offers a stunning touch-screen display, a comfortable typing experience and over 9 hours of battery life in a shockingly thin design that's lovely to behold and hold. However, that system is heavier and percent thicker than Acer's slice of tech. Overall, mobile professionals searching for the absolute slimmest notebook in the land should definitely snatch up the Acer Swift 7. Laptop Mag. Hybrid Bikes Hybrid bikes are super comfortable with their upright position great as commuter bikes are the perfect bicycle to get from point A to point B and back again and maintain or attain healthy fitness. Hybrid bikes are often referred to as fitness bikes and are made to be comfortable, easy to handle, and reliable. You can ride these fitness bikes to work, school, the store, and wherever else you need to go. Where: When you are riding in the city, there can be a lot of starts and stops, so there are multiple gears on many of these bikes. Comfortable and efficient, they are also great for the neighborhood and local bike paths. Customers use these bikes for all sorts of fun riding. These fun fitness bicycles feature flat bars for full control and easy access to shifting and braking. Powerful brakes are the norm, the ultimate level hybrid bikes feature an upgrade to even more powerful disc brakes or higher level V-brakes. Frames: Nearly all are equipped with aluminum frames for lightweight and rust-proof nature. The top level are made from super high grade carbon fiber. High grade carbon fiber hybrid bike frames as seen on the Cafe Century series have the best combination of lightweight, performance and definitely will not rust. Bike Buying Guide. Some of the best bikes for Speed and a Comfortable Ride Click on links below to view specs or order a bike. Rigid fork is responsive, saddle position is more comfy than a road racer. Buy to ride almost as fast as a road bike with a more comfy upright position. Suspension forks tame terrain. Hybrid Bikes are like a Comfort bike that uses smoother, faster rolling, more efficient c wheels instead of 26". Are you seeking endless open road? Get ready to venture farther on our assortment of road bikes. These smooth-riding, lightweight steeds are made to carry your butt across town, across state lines or across the frigging country. Windsor Wellington 3. Motobecane Mirage S. Flat bikes have most of the advantages of regular road bikesâ€"lightweight frames and relatively narrow tires for efficiency on pavementâ€"with a flat or upright handlebar. These bicycles are sometimes called fitness bikes or performance hybrid bikes. Most of them can accept somewhat wider tires, to make them suitable for use on unpaved trails. They usually have the ability to mount cargo racks and fenders, which make them good commuter bikes. Mastering these kind of insane obstacles takes a bad-ass bike. Cruisers will appreciate our Mango Beach Bikes, these bikes are also our own brand. These super comfortable beach cruisers bikes are perfect for cruising the campgrounds, sandy beachfront, or keeping close to home. Track or Fixies are designed to be ridden on a velodrome, which is a banked oval track specifically for bicycle racing. Some commuters prefer track bikes, however, due to their simple design, which makes them easy to maintain. They have a single gear that does not provide the ability to coast, so if the bike is moving, your feet must be pedaling. For even more simplicity, some riders prefer to not have brakes, since the fixed-gear mechanism can act as a brake. Most track bikes have drop handlebars, but some riders outfit theirs with flat or upright handlebars. Mountain bikes like road bikes, are a staple here at Cycle Spectrum Orlando, with bikes for men and women who are ready to lea
