Hi Our3girls You probably could, but the length of a saw's bar is directly proportional to the displacement of the engine. The smaller engines have a 14" bar, with a 30cc to 33cc displacement. The result would be a strain on the engine resulting in a slower cutting chain speed as well. Question: Chain Saw Idle How do I fix it? Hello You will at the very least MAY need to install a gasket and diaphragm kit in the carburetor. You also have the option if installing a rebuild kit as well. The rebuild kit contains all the parts from the gasket and diaphragm kit. In lieu of installing new carb parts, you could try opening the LOW speed mixture screw on the carburetor, Here is a tutorial. Change the fuel line. The inner part separates from the out part of the tube. It pinches closed and starves the engine of fuel. It would die lean. That is In fact, if the fuel line was "pinched closed" it would not even start or run at all, but the OP stated 1. If adjusting the carb does NOT fix the issue, then a removal, disasembly, and cleaning is usually needed. Question: Gaskets I think the carb gasket is separately included in the gasket kit, item no. There are a few gaskets in that kit. A carb on here DOES include a new purge bulb and fuel lines however. Question: Clutch Cover deerslayer. Hello deerslayer, When part number clutch cover is ordered. The parts included with it is item number 21 on page 3. Part number, bar adjustment kit. Sign up. Thank you!
