Xj700x

Max torque was Claimed horsepower was The engine was a liquid cooled in-line four, four-stroke. Stopping was achieved via double disc in the front and a expanding brake drum brake in the rear. The XJXS was fitted with a 3. The bike weighed just The wheelbase was The Yamaha XJ Maxim is a mid-size motorcycle manufactured by the Yamaha Motor Company and introduced in as the Maxim and produced through The XJ Maxim comes equipped with Four cylinder, air cooled, twin cam cc engine. The Maxim-X lays to ruin the dichotomy of style and function: More significant even than its valve technology and high-performance numbers is its demonstration that trendy fashion need and versatility and that power and high-style need not be at odds. With the Maxim-X, Yamaha has rounded the corner and headed back with function as the central issue, back to the virtues that remain long after the glitter has lost its sheen. From CycleChaos. Image not available Photos not available for this variation. This one has been ridden miles a year for a total of Make Yamaha. I am only the second owner of this flawless bike! This is the Maxim-X model, which features liquid cooling. Only lbs! This bike is in MINT condition. No rips or tares in the seat, no dents or scratches in the paint, and it runs perfect. It has been stored inside its entire life. The bike has 23,XXX actual miles. It has brand new Dunlop D tires with less than miles on them, a

new clutch cable, new front EBC brake pads, new rear EBC brake shoes, coolant changed, engine oil changed extra filter is included , rear end fluid changed, and new spark plugs. This bike rides perfect and its ready to go. Clean title. It was kept in a garage for over 20 year prior to being fully pulled apart and rebuilt to primo nearly new condition. I have over a few grand put in to this bike and I am just trying to get some of the investment back. I do not want to sell it and the price is FIRM. Collectors search these motors far and wide due to their reliability and super speed. This bike runs absolutely amazing and all service has been performed within the past month. Every part is still on the bike to include the tool kit that Yamaha included. Inline 4 cylinder engine has plenty of power to make it a blast to ride! It is black because I used Plasti Dip. This bike will be an antique in January and runs like new. Must see! Completely original except for coils and wires. Bike is absolutely better than new, flawless. It is likely the best example of this bike left on the planet. Original 14xx miles, original Bridgestone tires. Bike has been completely gone over and serviced. Comes with original back wheel and tire and also has a lighter more attractive? Every who has owned this bike has loved it and everyone who has sold it has regretted it. I will regret it too. It is currently black because I used Plasti Dip. Serious Inquiries only please. EBC street replacement brake rotors are your fix! These rotors are manufactured from high-quality materials and are guaranteed to give you pristine stopping performance. EBC street replacement brake rotors are designed to fit directly onto your OE hub, leaving you worry-free when it comes time for installation. Get back on the open road and stop your street warrior like it did when it came from the factory. EBC street replacement brake rotors are cross-drilled and slotted to help dissipate heat and keep your brake pads from excessive wear. Baton Rouge, LA. Davis, CA. Carthagena, OH. Coconut Creek, FL. I absolutely love this bike. It has miles on it but don't let that scare you. I have had a lot of work done to it. I am only getting rid of it for a big cruiser. It is a MaximX. It is a vert fast bike. Rides like a cruiser and moves like a crotch rocket. The tires have only been on for miles. It have new clutch as of last year. Carbs were just cleaned and synced last year. Brakes have only been on for miles. She is a lot of fun to ride. Need gone ASAP and will accept reasonable cash offers. Has a new starter motor, front tire, headlight bulb, license plate light. Comes with two other handlebars stock and 12in apes fender and 2 stock mirrors. I believe carb needs cleaning or synced I'm not sure. Revs high when suddenly stopped and down shifting quickly I believe the butterflies are sticking needs a new starter clutch if you want a solid start up every time. Leaving for a deployment so will take any reasonable offer! Make Suzuki. Model Gsx The engine runs like new and the transmission shifts very smoothly. It has around miles on it and is running very well. The bike was Garage kept and well maintained. Just bled the breaks and changed break pads. It has a fresh synthetic oil change and new spark plugs just installed. It is a 20 year old motorcycle so small things may go wrong but can usually be fixed easily. If you have any questions or want more pictures feel free to text email or call me Come by and lets go for a ride so you can get to know the bike a little more. Starts well, runs well, shifts well. Great starter bike that looks good. Cash only. Completely original except for coils and wires. Bike is absolutely better than new, flawless. It is likely the best example of this bike left on the planet. Original 14xx miles, original Bridgestone tires. Bike has been completely gone over and serviced. Comes with original back wheel and tire and also has a lighter more attractive? Every who has owned this bike has loved it and everyone who has sold it has regretted it. I will regret it too. I have for sale a yamaha Maxim X cc motorcycle. It is an It has some cosmetic damage, but is in amazing shape for its age! I bought it when I was 16 and put some work into the bike, let alone a bunch of money. If you have any questions, or know someone who would be interested in the bike, just comment here or leave me a message! Thanks so much. The bike is a red color, slightly faded in a few spots. There is a passanger seat with backrest, one seam is ripped. This could be easily fixed, or covered with black electrical tape. The only thing that doesn't work on the bike is the "low fuel" light. I usually just go miles then refuel. The previous owner layed the bike down and broke off the left hand mirror, which he Gorilla glued back on. I had my grandfather put some Mighty Putty on it, and it hasn't had any problems at all. I believe the tank is a 1. I'm not quite sure. I have put a few more miles on than the odometer reads. There are a lot of miles on this bike, but it still runs like it has a fraction of the miles. When I first bought the bike my step dad and I brought it to a work shop and had everything looked over. The bike comes with a new battery, installed at the end of the riding season last year, good tires, saddle bags, and a forks bag. The saddle bags have holes worn in the bottom from the previous owner's missuse. I just lined the bottom with a plastic bag, and they worked just fine. I have pictured the "damaged"

mirror so you can see what I am talking about above. For more pictures, please e-mail. The Yamaha Maxim X is liquid cooled, inline 4 motor 5 valves per cylinder, with a shaft drive. Only 8, miles on this time capsule. Come in to Everett Powersports and see this today! Perfect running condition, New tires, Brakes and Filters. Must see! Model XS. Working engine pulled from bike, all wires are in in working order, clutch cable was cut will need to be replaced all gears work and gearbox is in working order. The engine has no internal or external damage, just needs cleaning up. To use these late type friction plates remove the old clutch plate separator O-Rings discard , and add 1 additional steel drive plate and replace all 6 old type thick friction plates with 7pc. Use 5 pc. Whether you run a standard motorcycle, or a tuned sportbike, Dynojet Carburetor Jet Kits can provide you with a simple and affordable solution to all your carburetion problems. Dynojet Jet Kits increase power and smoothness

throughout the entire rev range, while maintaining optimum fuel economy. Each Dynojet Jet Kit includes comprehensive instructions which show step-by-step installation and testing procedures to ensure a perfect setup every time. This is backed by free telephone and Internet support to Dynojet customers. Kit installation and Dynamometer services are available in many parts of the world. Please see the Dynamometer Center Search Page to locate your nearest dyno shop. Many newer bikes have very flat power and fuel delivery curves when used with the stock exhaust and air-box. When aftermarket pipes are used, the power curve is usually not flat. You find the need to lean out for low speed and richen up for top end; or leaner on the top end and richer at the low speed. In order to achieve full function and driveability, Dynojet develops shrouds or cap style nozzles for adjusting the upper or lower top end. They also have an effect similar to fuel injection by breaking up the fuel as it enters the air stream. The needle is designed to give the correct amount of fuel throughout the mid-range and is also designed to allow adjustment from groove 1 to groove 6 with little or no effect below R. This isolates all circuits from each other and ensures easy set-up of the midrange and driveability. This jet allows air into the emulsion tube to mix with fuel being drawn up from the float bowl. It controls the amount of fuel which can be pulled from the float bowl into the venturi. The larger the size of the main air jet, the more air you get and less fuel. The smaller the main air jet, the more fuel you get and less air. Dynojet alters this only to achieve the flattest possible fuel delivery curve. Dynojet has found that the engine will idle with the standard pilot jet, with or without the air-box and with the slides and needles removed from the carburetors; therefore we never change the pilot jet. Doing so is proof that you are not using the other circuits correctly. Idle and off idle is controlled by the mixture screws and the float level which have the most positive effect below R. On some models the pilot air jet is changed to provide optimum fuel economy. Correct balancing of the carburetors also ensures a smooth idle. We develop our main jets to correctly serve two functions; static load and dynamic load. The static load is the fuel received through the main jet in the upper gears, where the tachometer is moving very slow. The dynamic fueling portion of the main jet is the amount of fuel received from the jet in the mid-range potion of the power. You then install mains. After running the bike you notice the top end has improved but the mid-range doesn't pull as well. You then install mains and you notice the mid-range is great but the top end is slower. This is a common compromise when using stock main jets and needles. These jet kits give some extreme upgrades in a small package. They increase power and smoothness throughout the entire rev range while maintaining fuel economy. There are multiple kit options from stock commuter motorcycles to race-ready bikes and everything in between. Dynojet remains committed to the needs of the Powersports and Dyno community. While taking the appropriate precautions for the safety and well-being of our customers and employees, we are continuing to fulfill all orders and support our customers. Additionally, we are extending our return policy at this time. Review this product. Ships in 2 days. Skip to the end of the images gallery. Skip to the beginning of the images gallery.
